

Portfolio System - How It Works

This document is a placeholder describing the high-level architecture of this personal portfolio application.

1. Frontend: a React + Vite app renders project cards from configuration files under `src/config/projects`.
2. Content: project text is translated via the i18n dictionaries located in `src/i18n/languages`.
3. Assets: images, videos and PDFs are served statically from `public/assets/projects/<project-id>/`.
4. Documentation: each project links to a technical doc and a user guide PDF, opened in a new browser tab.

This is a placeholder file for demonstration purposes only.
